Garment on Hanger (GOH) services

Better Control & Increased Productivity: GOH systems provide an orderly and controlled flow of goods through the manufacturing, inbound and outbound processes; resulting in improved throughput and increased productivity.

Sorting and Pre-distribution: At the point of origin of your product, trolleys are used to sort garments in accordance with your pre-defined final destinations, down to the level of your retail shop or final receiver.

Supervision at Source: Our garment experts are trained to optimize the utilization and handling of your garments – in our warehouses or at your vendors' factories.

Reliable Performance: Our GOH services are in operation for a range of retail companies and have proven to be a solid support to their supply chain. All handling is based on your customized Operating Procedures, developed with you.

In-transit Visibility: By monitoring your process milestones and the generation of alerts in case of disruptions, you will always know where your garments are. You can focus only on the exceptions and will reduce the level of distractions to your organization.

Reduced Cost: By minimizing the need for manual handling and refinishing of your products, you will save money and streamline your operational processes, improving the bottom-line of your company.

Benefits and features:

- Garment on Hanger expertise
- Specialized facilities in Asia
- Quality equipment for bar and string systems solutions
- Customized Operating Procedures
- Vendor management and supervision
- Alerts in case of disruptions
- In-transit visibility
- Business Intelligence and Key Performance Indicators (KPI)
