## OOCL Logistics helps set national standards for chemical logistics

OOCL Logistics has always been a logistics industrial leader. For each sector we serve, we have specialized experts with in-depth knowledge who provide integrated supply chain solutions safely, reliably, and cost effectively. This is especially true when it comes to logistics services for products that require special attention, like chemicals.

With our years of experience serving top players in the chemical field, like Dow and WACKER – companies that uphold the most stringent standards, we know exactly the best practices that will serve the wider chemical logistics industry.

We have set high standards for ourselves in serving our customers and are dedicated to uncompromisingly meeting these

standards. Thus, as a global logistics market leader, we hope that our expertise will benefit the industry at large as we share what we have learned and what we do with others and encourage the same attitude within the logistic industry.

That's why OOCL Logistics (China) Limited are honored to be invited by the Standardization Administration of the People's Republic of China to establish two sets of national standards for chemical logistics handling: "GB/T 34403-2017 Specification for emergency handling of non-dangerous liquid chemical products logistics" and "GB/T 34404-2017 General specifications for non-dangerous liquid chemical products reverse logistics service", which will take effect by May 1, 2018.

We are offering years of practical experience to the composition of these standards. The standards cover the rules that a logistic service provider must follow to optimize operations when handling non-dangerous chemical liquid logistics as well as reverse logistics services. The requirements cover logistics' principles, preparatory steps, disaster prevention and emergency treatment methods as well as monitoring, evaluation, and improvement measures.

We understand there is nothing more important than operating responsibly in chemical logistics. Even the slightest glitch can have catastrophic results not only to our customer's brand but also the environment and the global communities we serve. OOCL Logistics is confident that the work we have done to assist in the setting of these standards will prove invaluable to the handling of chemical liquids and will help minimize risk in the chemical supply chain.

# OOCL Logistics expansion in Spain and Portugal

OOCL Logistics is again expanding our network of over 130 offices in more than 45 countries by opening representative offices in Spain and Portugal. As a global logistics service provider, OOCL Logistics offers comprehensive services for our customers regardless of where their business may lead.

Spain is Europe's fourth largest country and together with Portugal represent sizeable markets for export and import services. By managing these services locally, we continue our global practice of customer-centricity and focusing on our customers' requirements - offering sophisticated end-to-end logistics solutions customized to specific supply chain needs.

Our specialists provide international air and ocean (FCL and LCL) logistic services, coordinate Customs formalities and offer domestic warehousing/distribution and other value-added services.

With a network around the world, OOCL Logistics' global capabilities ensure that you are connected to the world's changing sourcing locations and business growth opportunities and allow you to make "All the Right Moves" in your supply chain.

## MARKET TALK

China has announced that over US \$160 billion in infrastructure projects are in planning or construction for the "One-Belt-One Road" project, aiming to achieve an aggregate economic value of \$21 trillion or 29 percent of global GDP.

This goal is furthered by projects spanning over 60 countries with interconnected rail lines, highways, pipelines and logistics zones between China and Europe. These include the opening of Kunming-Bangkok highway and expressways from Kunming, China to the borders with Myanmar, Laos and Vietnam, the Lancang-Mekong river corridor waterway, and railway construction like the China-Laos-Thailand railway.

## OUR NEWS
