Achieving High Quality Assurance

Currently, logistic service providers are required to comply with the regulations in various areas such as the security, safety and environmental protection requirements. OOCL Logistics strives to lead systematic operational procedures as guidance for the logistics industry. To offer professional supply chain services that meet the international standards, strict guidelines are set at OOCL Logistics. Over the years, we have obtained several certifications and applied various compliance programs to our daily operations.

To achieve quality assurance through staff training, we improve our personnel's techniques and makes them aware of the company's strong commitment to quality. Our Experienced team members ensure continued

compliance with the guidelines and requirements within the standard operating procedure by all participating parties. Regular performance reviews are critical to meeting the quality standards of all customers.

As a result of the strong compliance culture, we were one of the first group of companies to be CTPAT certified. Other certifications include but are not limited to AEO, PIP and other Security related Compliance Programs. Being certified, we have been measured and met various standards governing security management, physical security and access controls.

In 2018, we were delighted that OOCL Logistics (China) Ltd was certified as ISO9001:2015 compliant by Lloyd's Register

Quality Assurance (LRQA). ISO 9001 is defined as the international standard for a quality management system (QMS) published by the International Organization for Standardization (ISO). Also, it is the most recognized certification model by offering solutions in the key strategic fields of any operations: Quality, Health and Safety, Environment and Social Responsibility. Being certified is evidence of our commitment to continuous improvement and the goal of maintaining the highest standards of excellence. We believe that these standards will be the fundamental guide for the logistics industry in the standardization of the operations.

Through our application of quality management of all operations, OOCL Logistics is a reliable and comprehensive logistics partner to help you achieve high-quality operational performance. We look forward to facilitating the development and adoption of QMS by working together and sharing experiences with our customers and other business partners.

OOCL Logistics Gives Back to Our Communities

Sustainable development is a key corporate focus. Being an integral part of the community, we are a caring company that actively considers the needs of the people in our society. Our main focus is on underprivileged children and other similar groups in the community.

We reinforce our commitment to local community through employee volunteering services. For example, our Fuzhou team organized a school visit event last December. We visited the pupils at the Min Hou County News Hope Rehabilitation School. Our colleagues had a lot of fun with the kids and enjoyed a performance by hearing impaired children. We are deeply inspired by them. We will continue providing support to these children in need and we hope that these kids will grow up healthy with a positive attitude throughout their lives.

Additionally, in 2018 OOCL Logistics continued to be the supporting partner in the “Pass-it-On Campaign”, organized annually by The Hong Kong Red Cross. It is our fifth year participating in this very meaningful event. We provided picking and packing operations, delivery services from warehouse to retail shops, schools, commercial and residential buildings respectively. With our logistics capabilities and expertise, the OOCL Logistics team ensures the campaign runs successfully.

Throughout the years, we care and value the communities in which we live and work for a sustainable future. As a responsible corporate enterprise, our employees dedicate significant effort to creating a positive influence to inspire others towards respect for Mother Earth by getting involved and taking actions in various sustainable activities and events. A small change can make a big difference, we sincerely hope that everyone will join and support us to improve the lives of those people less fortunate than ourselves.

MARKET TALK

The International Maritime Organization (IMO) will enforce a new 0.5% global Sulphur cap on fuel emissions from 1 January 2020. It will be challenging for both carriers and BCO's adapting to the new IMO regulation of low Sulphur fuel. The added complexity will be critical to navigate and guarantee critical space throughout the transition. The OOCL Logistics team is investigating each carrier's position and calculations to help determine a customizable approach for customers to ensure their products are delivered at the right time, to the right place, at the right cost.
