Enhancing Your Trucking Efficiency Through Digitalization

Newly developed FAST-PASS (FP) QR code

OOCL Logistics is delighted to announce its newly developed FAST-PASS (FP) QR code for instant empty container pickup at the depot and efficient cargo arrangement at the factory, which reduces the trucking turnaround time due to the manual documentation verification process.

To smoothen the container handover process, encrypted FP codes are reserved for empty containers and then dispatched to the truckers' mobile device, enabling them to collect equipment and provide status updates promptly via our Transportation Management System (TMS), therefor eliminating the complex manual process. Truckers are required to take a photo at the container door, which is stored in our TMS, together with the automatically watermarked GPS location, date and time, container number and tare weight for VGM submission. As a result, the photos can easily be retrieved to serve as a proof of record for audit purposes in addition to reducing potential disputes with damage claims.

Alternatively, pre-alerts sent to the factory before the trucker's arrival allows enough time for logistics planning, which minimizes trucker's idling time. With GPS tracking functionality, the entire shipment cycle could be traced in real-time, which vastly improves cargo visibility and facilitates immediate exception handling. The solution was first implemented with OOCL and has been extended to multiple carriers to deliver a comprehensive service for our valued clients.

Remarkable Add-on Features of the FP Code:

- Local language support
- Unique code within a limited timeframe for security concern
- Geo-fencing capability

Expanding Service Network For Our Valuable Client

Delivering high-quality service to PT Panasonic Manufacturing Indonesia

OOCL Logistics (Indonesia) is honored to take part in the first export shipment with our client, PT Panasonic Manufacturing Indonesia. Providing domestic logistics (trucking) and customs clearance services, we are recognized as one of their leading vendors in freight forwarding.

Our dedicated team offers the best service for road transportation as well as comprehensive delivery order management to facilitate the movement of goods from Jakarta to Cambodia. Due to the import restriction imposed by the Cambodia government, OOCL Logistics promptly came up with an alternative solution – shipping goods from Jakarta to Singapore, subsequently exporting them from Singapore to Cambodia. In conjunction with OOCL, we continually expand our end-to-end logistics expertise into other areas of supply chain while delivering high-quality service to help our clients improve operational efficiency.

Major Benefits:

- Tailor-made logistics solutions to cater clients' specific requirements
- Unrivalled experience in serving leading electronic companies
- One-stop service capitalizing our synergy with OOCL
- Local expertise in customs clearance and government regulations

Malaysia–Thailand Rail Service

Newly Launched Malaysia–Thailand Rail Service

OOCL Logistics (Malaysia) is pleased to announce during October 2022, the launch of regular rail service between Penang and Padang Besar, promoting Southern Thai exports to China and other destinations via Penang. South Thailand is vastly rich with resources such as rubber, latex, rubberwood, sawn timber, particle board, etc., yet the ocean transport network and capacity is limited.

With the support of our rail service, it simplifies the communication of the logistics workflow. No longer do you need to deal with a 3rd party agent to secure space, keep track of rail traffic and arrange laden return separately, reducing monitoring costs and resources. After shippers pick up empty containers at Padang Basar, we manage all procedures to ensure cargo is delivered to the destination within the customers' requirements.

Our Service Offering

- Daily rail service with proven schedule reliability
- Experienced local teams in handling cross-border logistics services
- Strong connections with a network of carriers in facilitating end-to-end shipments
